STORAGE AND HANDLING

At no time should Mouldings and Doors be stored in a damp or freshly plastered area. Store products flat, on a dry interior surface in such a manner as to allow circulation of air. Relative humidity in the area should not be less than 30% or greater than 60%. Never subject Moulding or Doors to abnormal heat, extreme dryness or humidity, or any sudden changes in atmospheric conditions. All Hardwood products should be allowed to acclimate to the average prevailing atmospheric conditions within the installation area.

FINISHING

Due to the nature of the materials and various finishes available, Smith & DeShields makes no claim as to the possible finished product, however, the following recommendations are offered and should be adhered to:

- All Moulding and LDF Doors must be finished with 120 or 150 grit sandpaper prior to finishing.
- Avoid initial sanding with grit finer than 120.
- Always seal all concealed and back surfaces of Moulding to minimize expansion and contraction, expansion and contraction is a natural characteristic of wood products and will not be deemed a defect.
- Always consult the manufacturer of the finish to be used as to its specific application on the species of wood chosen. Various finishes react differently to various woods.
